Data backup services

Data Backup made simple

We probably don't need to tell you how important it is to protect your data; in conjunction with your data security provisions, data backup and recovery should form part of your business continuity plans to protect your business against data loss or theft. The subject is complex but the solution doesn't need to be.

Whether your data is held on physical hardware or in the cloud your data backup provision can be achieved with ease.

Backup and recovery designed for you

Simply choose which data and assets you want to protect:

- Physical and virtual servers
- Physical network attached storage locations
- Workstations
- Business documents
- Microsoft 365 Exchange, OneDrive, etc.
- Websites

Then decide on how want your data and assets protected

We will provide you with physical and hosted data backup options to consider that suit your budget and disaster recovery strategy.

Once your backup solution is in place, we can help you to develop backup policy documentation for you to add to your wider suite of data security policies.

Yes, we know backing up data isn't exciting. We know that it's a housekeeping task that you'd rather not have to think about, and which sometimes gets forgotten. But we're not overstating the case when we say data backup is vital.

When you begin to imagine what you could lose, coupled with the fact that you now have to report data loss as a GDPR requirement, keeping on top of that housekeeping task suddenly becomes far more attractive. But you don't have to do everything yourself because we offer a range of services to ensure your information is always safely stored.

Working with a Managed IT Service Provider couldn't be easier.

With a huge range of services on offer, we help you to select an approach that works best for your business.
